

# CONTENTS

<b>Preface</b> .....	ix
<b>Authors</b> .....	xi
<b>Abbreviations</b> .....	xv
<b>1 Auxin signal transduction</b> .....	<b>1</b>
<i>Gretchen Hagen</i>	
Abstract.....	1
Introduction.....	1
Major molecular components involved in auxin signalling.....	3
Current models of auxin signalling.....	6
Research in progress on auxin signalling.....	7
Developing areas of research on auxin signalling.....	8
Future challenges.....	9
Summary.....	10
References.....	10
<b>2 Plant cytokinin signalling</b> .....	<b>13</b>
<i>Erika A. Keshishian and Aaron M. Rashotte</i>	
Abstract.....	13
Introduction.....	13
The structures and activities of cytokinins.....	14
Cytokinin signalling: multistep phosphorelay.....	16
The receptors: histidine kinases.....	17
Relaying the signal: histidine phosphotransfer proteins.....	18
Response regulators.....	19
Type-B response regulators.....	20
Type-A response regulators.....	22
Cytokinin-response factors.....	22
Conclusion.....	23
Three immediate future goals and directions for cytokinin research.....	23
Summary.....	24
References.....	25
<b>3 Abscisic acid: biosynthesis, inactivation, homoeostasis and signalling</b> .....	<b>29</b>
<i>Ting Dong, Youngmin Park and Inhwan Hwang</i>	
Abstract.....	29
Introduction.....	30
Physiological roles of ABA in plants.....	30

ABA biosynthesis and catabolism.....	31
Long-distance ABA transport.....	34
Regulation of ABA homeostasis.....	36
ABA perception and initiation of ABA signalling .....	36
Conclusions and future perspectives.....	41
Summary .....	42
References .....	42

## **4 GA signalling and cross-talk with other signalling pathways .....49**

*Vai S. Lor and Neil E. Olszewski*

Abstract.....	49
Introduction .....	49
GA signalling involves the destruction of proteins that repress GA responses .....	50
DELLA proteins are co-activators of transcription .....	52
Mutant DELLA proteins underlie the ‘Green Revolution’.....	52
DELLA proteins mediate cross-talk with other signalling pathways .....	53
Homeostatic regulation of GA signalling: GA signalling turns off GA signalling.....	56
What are the gaps in our knowledge of GA signalling? .....	56
Summary .....	57
References .....	57

## **5 Mechanisms of ethylene biosynthesis and response in plants .....61**

*Paul B. Larsen*

Abstract.....	61
The role of ethylene in plant development .....	62
Ethylene biosynthesis.....	62
The canonical ethylene signalling pathway .....	63
The biochemical rheostat that controls the level of the ethylene response .....	66
Conclusion: future challenges for understanding the role of ethylene in plant biology .....	67
Summary .....	68
References .....	68

## **6 The molecular circuit of steroid signalling in plants .....71**

*Thomas Hartwig and Zhi-Yong Wang*

Abstract.....	71
Introduction .....	71
Plant steroid signalling pathway.....	72
The network of signal cross-talk and integration .....	75

Summary .....	80
References .....	81

## **7 Novel players fine-tune plant trade-offs.....83**

*Selena Gimenez-Ibanez, Marta Boter and Roberto Solano*

Abstract .....	83
Introduction .....	84
JA-Ile perception and the nature of the bioactive hormone.....	85
The JAZ family: a multifunctional and versatile hub of repressors.....	86
Direct targets of JAZ proteins: the array of TFs that control JA-Ile responses .....	88
JAZ proteins as key hubs in cross-talk with other hormone signalling cascades .....	92
Conclusions.....	94
Summary .....	95
References .....	96

## **8 Salicylic acid signalling: new insights and prospects at a quarter-century milestone .....101**

*Xiaoyu Liu, Kristin S. Rockett, Camilla J. Kørner and  
Karolina M. Pajerowska-Mukhtar*

Abstract .....	101
Introduction: SA as the key immune hormone in plants .....	102
Salicylic acid biosynthesis.....	103
SAR mobile signals .....	104
SA receptor(s): the stories of NPR1, NPR3 and NPR4.....	105
Novel SA-signalling components .....	106
SA-mediated ER stress .....	107
SAR-mediated transgenerational immune memory .....	108
Closing remarks and future directions .....	109
Summary .....	110
References .....	110

## **9 Plant peptide hormone signalling .....115**

*Ayane Motomitsu, Shinichiro Sawa and Takashi Ishida*

Abstract .....	115
Introduction .....	116
Class 1: small peptide hormones.....	116
Class 2: peptide hormones with disulfide bonds.....	124
Class 3: processed peptide hormones with disulfide bonds.....	125
Conclusion and perspective.....	126
Summary .....	127
References .....	128

## **10** **Florigens and antiflorigens: a molecular genetic understanding**..... 133

*Ianis G. Matsoukas*

Abstract.....	133
Introduction: the florigen mystery.....	134
Floral signal transduction.....	135
The photoperiodic pathway: a model for the mode of action of FT.....	136
The role of FT homologous, orthologous and paralogous genes in other species.....	137
Florigen: beyond floral signal transduction.....	138
Antiflorigenic signal transduction.....	139
Floral induction may involve multiple florigens and antiflorigens.....	141
Conclusions.....	145
Summary.....	146
References.....	146

## **11** **Hormone cross-talk during seed germination**..... 151

*Sonia Gazzarrini and Allen Yi-Lun Tsai*

Abstract.....	151
Introduction.....	152
ABA biosynthesis and signalling.....	153
GA biosynthesis and signalling.....	155
ABA–GA cross-talk.....	155
Ethylene biosynthesis and signalling.....	158
ABA–ethylene cross-talk.....	159
Conclusion.....	161
Summary.....	161
References.....	162

## **12** **Comparison of plant hormone signalling systems**..... 165

*Antoine Larrieu and Teva Vernoux*

Abstract.....	165
Introduction.....	166
Auxin, jasmonates (JAs), gibberellins (GAs), strigolactones (SLs), abscisic acid (ABA) and salicylic acid (SA): signalling through cytoplasmic and/or nuclear receptors.....	166
Cytokinins (CKs), brassinosteroids (BRs) and ethylene: signalling through transmembrane receptors.....	173
Discussion.....	177
Conclusions.....	178
Summary.....	178
References.....	179

<b>Index</b> .....	183
